

1. The past, the present and the future of **economic growth**.
2. The **human resources** i.e. the population quantity, quality and mobility.
3. The **finance resources** and their importance for growth.
4. The **natural resources** and the implication of their depletion and of climate change to economic growth.
5. The importance of **trade** and technological mobility.
6. We sought to investigate two important questions:
 - what can we say about our **ability to govern ourselves globally**?
 - how citizens **reveal and communicate preferences** and can we do any better in that respect?
